## THE RENEWABLE CORPORATION COMMENTS ON CURRENT ECONOMIC CRISIS

**Sarasota, FL. March 24, 2009-** The Renewable Corporation (SYMBOL: RNWB), developer of the proprietary [ALCHEMx™](#) production platform designed to provide eco-efficient products, services and technologies that leverage renewable resources and alternative energy solutions, comments on the impact of the economic crisis on its business strategy and future business development.

CEO, Andy Badolato stated, “The United States continues to suffer from an enduring economic crisis; including job losses, bank failures and across the board corporate layoffs. There is a unified theme emerging from top economists, in both the Republican and Democratic parties and the grass roots consumer level. The best ways to recover from this crisis and create jobs, grow the economy and decrease our dependence upon foreign oil is to shift the United States to alternative energy solutions and implement energy efficiency practices.”

According to an outline of Barack Obama’s proposed economic stimulus and budget plans, investing in clean energy technology and efficiency practices will create the jobs that will form a new foundation for the middle class. Obama’s plan is to create five million new jobs by strategically investing \$150 billion over the next ten years to catalyze private efforts to build a clean energy future.

Badolato commented further, “Our Company is well positioned to capitalize on this shift that will be taking place. We will utilize renewable resources such as sugarcane ethanol for alternative fuel use, as well as conversion into plastics and other chemicals utilizing the ALCHEMx™ ethanol production platform technologies. We are currently targeting the development of a project in the gulf coast to produce renewable plastics. This will create jobs, reduce the impact on the environment and provide sustainable clean renewable plastics for use in everyday consumer packaging and other products.”

**The Renewable Corporation**, (TRC) provides products, services and technologies using renewable resources and alternative energy solutions. TRC's processes are eco-efficient and apply and adhere to sustainable practices and standards. TRC accomplishes this with the [ALCHEMx Production Platforms™](#), which integrates technologies, sustainable manufacturing, installation and distribution with our supply chain partners to meet customer needs, pricing requirements and provide an alternative energy economic advantage. TRC provides these competitive solutions to meet market demand via its operating subsidiaries:

[Renewable Chemicals Corporation](#), (RCC) provides plastics and other chemicals from renewable resources as an alternative to petroleum or petrochemicals. RCC utilizes intellectual property and proprietary engineering systems customized to the specific sustainability and pricing requirements of the consumer packaging and polymer material industries. Cosan SA is RCC's renewable resource provider and joint venture projects partner. Cosan, based in Brazil, is one of the world's largest sugarcane processors and ethanol producers. Sugarcane is considered the most efficient renewable resource and when compared to corn; has an energy balance 7 times greater, does not rely on a competing food source, yields more than twice as much energy per acre, and has 3 times greater reduction in greenhouse gas emissions.

[Renewable Products and Services Corporation](#), (RPS) provides renewable and alternative energy products, services and solutions for residential, commercial, and municipal installation applications. RPS leverages a national network of company authorized Renewable Technician™ distributors that provide and retrofit products and services in geographical exclusive territories. RPS provides technology products, customized software, marketing tools and resources, training and certification, back office administration, call center support, and web based product information and order fulfillment. RPS oversees and provides its distributors and customers' access to available financing alternatives, government backed loans, and tax credits under the newly enacted Renewable and alternative energy government spending programs.

TRC Technologies Inc. acquires develops, licenses, and integrates intellectual property that will enable the favorable economic implementation of renewable and sustainable biotechnologies.
